DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of the species of Group I in Paper No. 19 is acknowledged.

Claims 69-79 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 19.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 13-18, 32-33, 36-37, 52-54 and 56-57 are rejected under 35 U.S.C. 102(e) as being anticipated by Haselton, III et al (US 6,242,258).

Art Unit: 3763

Haselton ('258) discloses a method for treating that includes administering a photosensitive agent (caging group, see 4:25-35) to a subject for inhibiting cell growth or enhancing cell death or for treating a cell proliferative disorder (antisense application for encoding a product that promotes cell killing, see 3:40), applying an electric pulse (electroporation, see 7:23) to a cell of the subject of a sufficient strength and duration o electroporate the cell with the photosensitive agent (see 7:18-22), and applying light (see 5:17-20) of an activatable wavelength (see 11-13) to the cell thereby activating the agent and treating the cell.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-5, 23-24, 34-35, 38-39, 41-45 and 62-63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haselton in view of Zewert et al (US 5,749,847).

Haselton meets the claim limitations as described above but fails to disclose applying multiple pulses to the cell, applying heat to the cell, and treating cancer. Zewert ('847) discloses delivery of a nucleotide agent by electroporation that includes delivering antisense nucleotides for treatment of cancer. The device utilizes electrodes for increasing the permeability of cell membranes. The electrodes administer a series of electric pulses (see 3:20-35). It is considered

Art Unit: 3763

inherent that the administration of the electric pulses to the cell will generate heat to about 36-42 degrees. The delivered agent can further include a radioactive label.

Allowable Subject Matter

Claims 25-31, 40 and 64-68 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed 10/29/02 have been fully considered but they are not persuasive. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., applicant's definition of photosensitive agent and in vivo electroporation) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 3763

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
